Claim Your Business in ChatGPT

ChatGPT now lets businesses claim their listing, keep their details accurate, and see how often ChatGPT mentions them. It's free and takes about 10 minutes. Follow these steps, then send us one record so we can verify your website for you.

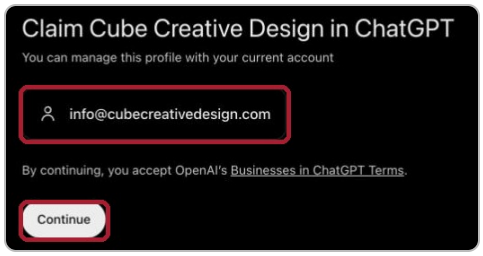

1 Find your business

Sign in to ChatGPT and go to **chatgpt.com/business-hub**. Search your business name and click the listing that shows **your website**, not "Create."

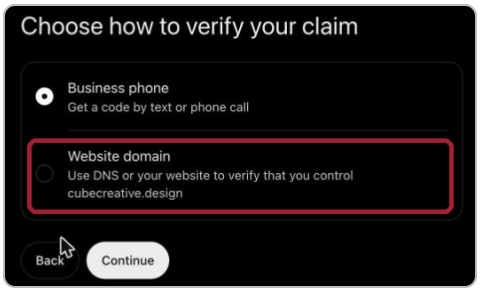

2 Check the account

The email shown will **own and manage** your listing. Use a company email you'll keep, not a personal one. Then click **Continue**. *(You'll see your own email here.)*

3 Choose "Website domain"

Pick **Website domain** and click Continue. We'll add the record to your domain for you. No "Website domain" option? Choose Business phone, or call us.

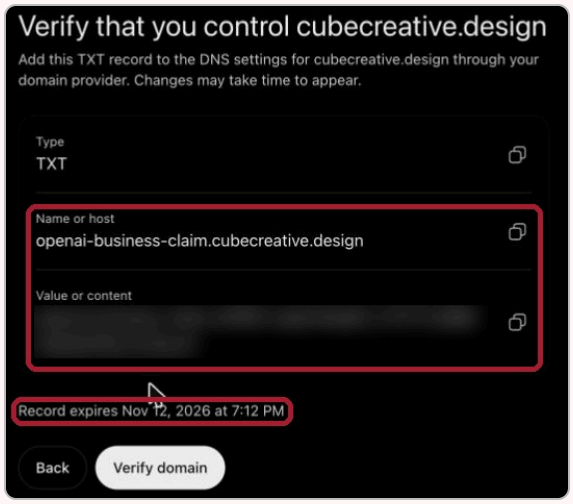

4 Send us your TXT record

ChatGPT shows a TXT record. Click the copy icons so every character is exact. **Keep this screen open.**

Email both lines to info@cubecreativedesign.com

- **Name or host**, starts with *openai-business-claim.*
- **Value or content**, starts with *openai-business-claim=*

Send it the same day. The record expires in about 24 hours. We'll add it and reply when it's live. Then click **Verify domain**.

5 Watch for OpenAI's email

You'll see "Claim received." OpenAI reviews it and emails its decision to the account from Step 2.

After OpenAI approves your claim

1. **Verify with Persona.** In Business Hub, select **Verify with Persona**. Have a government ID, your business registration details, and proof you can represent the business. Your name, address, and tax number must match your official records.
2. **Fill in every tab.** After Persona, select **Edit business info**: category and a 300-character description, business email (a code goes to that inbox), hours and time zone, logo and real photos, and your address. OpenAI reviews each change.
3. **Invite Cube.** Select **Invite** and add **info@cubecreativedesign.com** as a business admin, so we can keep your listing current.

Claiming your listing doesn't guarantee that ChatGPT will recommend your business more often. It gives you control of the information ChatGPT has about you. Screenshots are from Cube's own claim, November 2026. The TXT value is blurred because each one is private to its business.
